Corrigendum

Subject: Hiring of Social Media agency for the ISA.

With reference to the above mentioned subject, the following changes are made in the original RFP:

Page 2:

Background

1. Introduction:

The International Solar Alliance (ISA) was conceived as a coalition of solar-resource-rich countries (which lie either completely or partly between the Tropic of Cancer and the Tropic of Capricorn) to address their special energy needs. The ISA will provide a dedicated platform for cooperation among solar-resource-rich countries, through which the global community, including governments, bilateral and multilateral organizations, corporates, industry, and other stakeholders, can contribute to help achieve the common goal of increasing the use and quality of solar energy in meeting energy needs of prospective ISA member countries in a safe, convenient, affordable, equitable and sustainable manner.

The ISA will not duplicate or replicate the efforts that others (like International Renewable Energy Agency (IRENA), Renewable Energy and Energy Efficiency Partnership(REEEP), International Energy Agency (IEA), Renewable Energy Policy Network for the 21st Century (REN21), United Nations bodies, bilateral organizations etc.) are currently engaged in, but will establish networks and develop synergies with them and supplement their efforts in a sustainable and focused manner.

The ISA was initiated by India, and currently boasts a membership of 73 countries globally, out of a total of 122 potential countries.

2. Background

Universal access to energy remains unrealized. For more than 2 billion people, electricity is either unavailable, unreliable or unaffordable. An overwhelming share of these live in the 122 solar-resource-rich countries located between the Tropic of Cancer and the Tropic of Capricorn, especially in South Asia and Sub-Saharan Africa. These countries are optimally positioned to reap the benefits of cost-effective solar power and yet have been unable to do so due to a combination of underdeveloped markets, poor regulations and policy enforcement, and, at a root level, a lack of relevant knowledge and technical capacity. A significant opportunity is being missed. Until recently, there was no specific body in place to address and support the specific needs of solar technology deployment in these countries, leading to the provision of cheap and clean energy.
