SCOPE/ TERMS OF REFERENCE AND METHODOLOGY

A. ANNEX 1: SCHEDULE OF REQUIREMENTS

1. BACKGROUND

The International Solar Alliance (ISA) is an inter-governmental organization headquartered in Gurgaon, India. Currently 116 Countries have signed ISA Framework Agreement of which 94 Countries have ratified the Agreement. The membership is open to all the UN recognized Countries. The vision and mission of the ISA is to provide a dedicated platform for cooperation among countries where the global community, including bilateral and multilateral organizations, corporates, industry, and other stakeholders, can make a positive contribution to assist and help achieve the common goals of increasing the use of solar energy in meeting energy needs of ISA Member Countries in a safe, convenient, affordable, equitable and sustainable manner. For further information about ISA, kindly refer ISA website- <https://isolaralliance.org/>.

The International Solar Alliance (ISA) supports its membership in accelerating this energy transition through solar energy and its derivative applications. Against the backdrop of global momentum for GH as a viable energy transition vector, the ISA has launched a dedicated Programme - *Solar for Green Hydrogen* – to support its membership with analytics on potential for GH deployment across various end-use sectors. The programme will also assess and support ecosystem readiness, including appropriate standards and certifications, to channelize investments in the sector, and build capacity to create/strengthen domestic as well as cross-border hydrogen value chain.

2. CONTEXT

Green Hydrogen (GH), today, accounts for less than one percent of global hydrogen production. However, the declining costs of renewable electricity and electrolyzers indicate the investment readiness of GH sector. Although this emerging technology is gaining traction across industries, it faces certain challenges including, but not limited to, shortage of specialized manpower, high operational costs, lack of knowledge, underdeveloped infrastructure, absence of dedicated policy for GH and limited access to affordable financing. Interventions such as increased investment, government support, engineering development and skilled workforce development, are some of the critical levers for accelerating a smooth transition to GH economy.

During the COP 27 event, the ISA launched the Consultation draft (Phase 1) of the 'ISA's Blueprint for ecosystem readiness assessment of green hydrogen'. This report specifically evaluates the ecosystem readiness for green hydrogen within ISA member countries. The Blueprint Report provides a high-level roadmap for development of a hydrogen ecosystem in select ISA member countries.

The draft provides, in addition to recommendations for various stakeholders, a synopsis of methodology to assess ecosystem readiness in a country to adopt GH as an energy vector – on the basis of potential to produce and cost of production of GH, ability to consume GH, and the

infrastructure needed to produce GH viably. The consultation draft is aimed at an audience comprising of policy makers, regulators, and private sector stakeholders.

3. SCOPE OF WORK

Following the launch of the consultation draft (Phase 1) on the 'Blueprint for ecosystem readiness assessment of green hydrogen,' ISA plans to conduct Phase 2 of this work.

In this Phase 2 report, the ISA aims to offer a more profound analysis and a comprehensive understanding of the GH sector, focusing on the following three modules:

(A) Module - 1

Task: Deep Dive* into shortlisted 10 countries from within ISA and G20 member countries across all geographies.

Activities:

1. Readiness assessment for production/use of green hydrogen, encompassing national policies/strategies for production/end-use of green hydrogen, regulations, partnerships and cooperations, market development and sector attractiveness.
2. Identify green hydrogen opportunities across various end-use sectors
3. Recommendation for accelerated production/deployment of green hydrogen across identified member countries
4. Identify stakeholders - across the shortlisted membership, peer organizations, industry associations - for consultations and technical workshop to be organized by the ISA Secretariat.
5. Organize two country-level/regional stakeholder workshops for sharing report findings and consultations
6. Incorporate suggestions and recommendations from the participants and submit the final paper

** Some findings of the deep dive report will be presented at the COP-28 Dubai*

(B) Module – 2

Task: Design, develop and launch of ISA GH tool(s)

Activities: ISA plans to develop following tools** to be launched at various events:

1. GH Feasibility assessment tool– Tool to calculate and analyze green hydrogen costs and production
2. Project risk assessment tool – Tool to examine and analyze various risks associated with GH projects, such as, risks at project level, risks impacting society and environment, offtake, and financing risks etc.
3. Country readiness framework tool – Tool to assist in assessment of country readiness for a green hydrogen ecosystem, based on insights from deep dive and consultation report
4. Carbon accounting tool – Tool to keep end-use sectors informed about their carbon emissions, and actively seek to reduce their carbon footprint as their company grows, thereby supporting in reduction of emissions

The tool(s) developed will also be used to analyze green hydrogen ecosystem readiness in the shortlisted countries from Module 1. The key findings and results will be incorporated in the final report on country deep dive.

***The tools will also be featured on the ISA's Green Hydrogen Innovation Centre (GHIC) Portal, launched at G20 Ministerial in July 2023.*

(C) Module – 3

Task: Create commercial frameworks for the development of hydrogen hubs

Activities: ISA plans to accelerate the use of green hydrogen by enabling a network of producers, consumers, and local infrastructure for green hydrogen hubs ***.

1. Prepare framework for mapping clusters – List down the various factors that contribute towards supporting a large-scale green hydrogen project. The framework will include parameters such as (but not limited to) – potential hydrogen demand, type of industries, availability of land, current cost of hydrogen and hydrogen derivatives, cluster potential, export potential, renewable energy potential, current contracting structures for hydrogen procurement etc.
2. Identification and shortlist clusters/industry(s): Prepare a detailed list of likely industrial clusters where there is demand for hydrogen based on industry locations and then shortlisting 3-5 locations based on the framework
3. Determining resource accessibility - Assessing water adequacy and RE power, land, manpower and infrastructure availability
4. Estimating size of the project within the hub – Pilot and commercial
5. Scope of manufacturing of equipment – This will be based on Country/regional experience, incentives, announcements etc.
6. Estimate the overall costs

The framework developed will be featured on the ISA’s Green Hydrogen Innovation Centre (GHIC) launched at G20 Ministerial, Goa, in July 2023

***Some or all activities can involve a) Stakeholder consultations b) Industry Expert insights, to understand and evaluate the potential and readiness of adoption of green hydrogen across hubs.

4. WORK EXECUTION: Timelines, deliverables and Terms of Payment

Total duration of the assignment would be 12 months (20th September 2023 to 19th September 2024) subject to alignment of the several milestones to be presented in various high-level events including the ISA Regional meetings , G-20 meetings, COP28 etc. The deliverables and timelines will be as follows:
