#### **Annex-Terms of Reference**

for

#### **Development of Web-Based Solar Data Portal**

#### 1. BACKGROUND

International Solar Alliance is a global platform of 114 member countries working towards increased deployment of solar energy technologies to improve energy access, energy security and facilitate energy transition. ISA supports low-carbon growth trajectories of member countries by accelerating deployment of solar. ISA Secretariat, headquartered in Delhi, India, offers services under three strategic priorities: 1) Policy & Capacity Building; 2) Programmatic Support and 3) Analytics & Advocacy. The Alliance has established partnerships with multilateral development banks, development financial institutions, private and public sector organisations, civil society and other international institutions to achieve its objectives.

#### 2. PURPOSE

ISA aims to be a 'knowledge leader on everything solar'. To support this aim, as part of the Advocacy and Analytics priority, ISA comes out with various flagship reports such as Ease of Doing Solar (EoDS), Solar Investment Report, Solar Market Report and Solar Technology Report. These annual reports provide a wealth of information on the solar energy sector.

The Ease of Doing Solar (EoDS) report was piloted in 2019 with four countries, and in 2022, it covered 107 countries. It presents country-wise information on seven key drivers (macroeconomy, policy enablers, technological feasibility, market maturity, infrastructure, financing ecosystem, and energy imperatives) and related indicators. This data helps ISA's member countries assess progress of the solar ecosystem within their country and take actions to create an investor-friendly environment; aids developers and investors make key decisions; and supports ISA Secretariat in prioritising it's engagement with member countries and in its global advocacy efforts.

With support from an agency, ISA plans to digitise the data collected as part of the EoDS along with data from other flagship reports of ISA and publicly available sources, into a **web-based solar data portal**. The main objective of the portal is to function as an easily accessible comprehensive source of solar data i.e. be the **'go to source on solar data for all'**. The intended users of the portal are governments; ISA staff; multi-/bi-laterals, international and national organisations; businesses; media and public.

# 3. SCOPE OF WORK

The open portal will be a user-friendly interactive dashboard with attractive visualisations like maps, charts, icons and query-based functionalities, that will be hosted on ISA website. The contracted agency is expected to lead the planning, design, development, testing, and operationalisation of the portal. In addition, they will provide six months maintenance and updation support starting from the portal's Go-Live date.

The broad of scope of work under this contract is listed below.

# i. <u>Planning</u>

The contracted agency is expected to:

- a) hold inception meetings with a range of ISA stakeholders and staff to understand their data requirements;
- b) undertake detailed analysis of solar data and publications of ISA and other external sources to shortlist key data points that should be a part of the solar portal. The agency is expected to conduct thorough due diligence of each shortlisted data point i.e. assess the credibility of the data source, indicator definition, data collection method, frequency of data collection, associated copyright, data protection and security aspects to see if the data can be integrated into ISA's web portal and will be updated on a real-time basis;
- c) liaise with relevant organisations to source and integrate data into the portal
- d) review publicly available data portals to glean best practices on portal design, architecture and features
- e) review ISA's IT infrastructure including website to gauge the portal's requirements such as server space, front- and back-end software, licenses and any other systems required to develop, launch, maintain and update the portal;

At the end of this phase, the agency should submit an inception report detailing the portal features, processes and timelines.

### ii. Design & Development

Based on the above tasks, the agency will develop the portal's data architecture including all front- and back-end functionalities and integrate it with ISA's website. The agency will develop an SQL or any other database to manage the data; and use Tableau or other data visualisation tools for the user interface. They are also expected to coordinate and work alongside ISA's IT teams to procure/source any portal-specific IT requirements and operationalise the portal.

Some of the features the portal is expected to have are:

- Ability to aggregate, analyse and visualise data from multiple sources
- Ability to generate custom reports in different formats like charts, interactive maps, tables etc.

- Query-based functionality for trend analysis, comparisons or any other kind of queries
- Easy integration with external data portals, so that data is updated on a real-time basis
- Facility to upload datasets
- Quick search functionality
- Integration with ISA's website and any other current/future databases of ISA
- Provide analytics on site usage, number of downloads, number of visitors/region-wise visitors etc.
- Options for sending user alerts, collecting user feedback and troubleshooting
- Ability to download, export, email data in pdf, excel, other formats
- Responsive portal design which works on different browsers on laptop, mobile and tablets; with minimal load time and seamless navigation; and in areas with low internet connectivity
- All portal features should be available in ISA's official languages English, French and Spanish
- The portal should address and comply with all copyright, data protection, security, SEO integration and privacy related best practices and legislations/rules/regulations; and also meet all website accessibility standards for persons with disabilities

The features listed above are indicative.

#### iii. Pilot test and Launch

The contracted agency will work with ISA's IT team and ensure that the portal clears website audit. The user-interface should be pilot-tested with at least 20 different stakeholders and their feedback should be incorporated into the final portal design.

The portal should be fully operational by the agreed Go-Live date. The agency will provide full access to ISA to the design files, data sets and any other associated files.

#### iv. Training

The agency is expected to develop a user manual, training video and training slides; and conduct at least five orientation sessions on the portal and its features for ISA staff and stakeholders.

#### v. Outreach

The contracted agency is required to also help publicise the portal through the following:

- SEO integration
- Recommendations to link the portal to other data portals or organisations
- Develop a short one-minute video on the portal
- Develop three thematic profiles using visualisation techniques (1-2pages each) which will help publicise the portal. These will be used to showcase the portal's functionality and whet the appetite of end users

 Develop two attractive emails that can be sent as part of an email campaign to publicise the portal to ISA stakeholders

### vi. Maintenance, Updation & Sustainability

The agency should provide end-to-end support for six months after the Portal's Go-Live date — this will include portal management, updation and administration. A list of indicative tasks during this support phase are data updation, addressing user queries, incorporating ISA/user feedback and further fine-tuning the portal's features and data sets; generating reports; rectifying any issues; providing technical assistance to ISA staff and stakeholders; providing demonstrations to ISA stakeholders; and any other support.

In order to ensure sustainability of the portal beyond the contract period, the agency is expected to form an admin panel with ISA's M&E and IT teams and train the panel members on portal management. For this purpose, an administrative training manual should also be developed.

vii. Any other associated task as recommended by Director General, ISA or her/his nominee

#### 4. MANAGEMENT

The contracted agency will work closely with the M&E Specialist of ISA and is expected to independently coordinate with all relevant stakeholders, with some assistance from ISA Secretariat.

The selected agency will identify a Team Leader who will be the focal point for all discussions with ISA and be available for the entire contract duration. S/he will be responsible for supervision, quality assurance, completion of tasks, and timely submission of deliverables. S/he will also provide monthly updates and participate in relevant meetings, as required.

#### 5. DURATION

The contract duration will be for one year - July 2023 to June 2024. The first six months (July-Dec 2023) will be used for planning, design, testing, development and launch of the portal plus conducting orientations. The last six months will be spent on maintenance and updation support.
