ISA is under no obligation to award a contract to any Bidder as a result of this RFP.</p>
<p>2. <i>Fraud &amp; Corruption, Gifts and Hospitality</i></p>	<p>2.1 ISA strictly enforces a policy of zero tolerance on proscribed practices, including fraud, corruption, collusion, unethical or unprofessional practices, and obstruction of ISA vendors and requires all bidders/vendors observe the highest standard of ethics during the procurement process and contract implementation.</p> <p>2.2 Bidders/vendors shall not offer gifts or hospitality of any kind to ISA staff members including recreational trips to sporting or cultural events, theme parks or offers of holidays, transportation, or invitations to extravagant lunches or dinners.</p> <p>2.3 In pursuance of this policy, ISA            (a) Shall reject a proposal if it determines that the selected bidder has engaged in any corrupt or fraudulent practices in competing for the contract in question;            (b) Shall declare a vendor ineligible, either indefinitely or for a stated period of time, to be awarded a contract if at any time it determines that the vendor has engaged in any corrupt or fraudulent practices in competing for, or in executing a ISA contract.</p> <p>2.4 All Bidders must adhere to the ISA Supplier Code of Conduct, which may be found at  <a href="https://isolaralliance.org/images/ISA%20Supplier%20Code%20of%20Conduct_14.4.2023.final%20version.pdf">https://isolaralliance.org/images/ISA%20Supplier%20Code%20of%20Conduct_14.4.2023.final%20version.pdf</a></p>

## Section 5. Terms of Reference

### 1. Background

Agrivoltaics is an emerging technology that combines solar photovoltaic (PV) systems with agricultural production on the same land area. It has the potential to provide renewable energy while maintaining agricultural yields, optimizing land use, and offering additional revenue streams for farmers. However, the techno-economic feasibility of Agrivoltaics needs to be carefully evaluated in the specific context of the selected member countries.

### 2. Objectives

The primary objectives of this study are:

- Conduct a detailed technical feasibility assessment of Agrivoltaic systems in the context of Bhutan
- Study the economic feasibility of agrivoltaics on crop productions
- Perform a comprehensive economic feasibility analysis, including cost-benefit assessments and financial modeling
- Identify potential barriers, challenges, and enabling factors for Agrivoltaics implementation
- Provide recommendations and strategies for successful adoption of Agrivoltaics including enhancing crop production.

### 3. Scope of Work

#### a. Technical Feasibility Assessment

- **Review of existing Agrivoltaics installations, technologies, and best practices globally:** Conduct a comprehensive literature review and case study analysis of existing Agrivoltaics projects worldwide. Understand the different technologies, system configurations, integration approaches, comparative analysis and best practices employed in various contexts and regions.
- **Analysis of climatic conditions (solar irradiation, temperature, precipitation) in target countries:** Assess the climatic conditions in the selected countries, including solar irradiation availability, temperature ranges, precipitation patterns and other relevant meteorological data. This analysis will help determine the technical feasibility and potential energy yield of Agrivoltaic systems.
- **Evaluation of land and soil suitability for Agrivoltaics systems:** Analyze the land topography, soil characteristics (type, fertility, drainage, etc.), and other factors to identify suitable for installing Agrivoltaics systems without adversely affecting agricultural activities. This may involve GIS-based mapping or field surveys.
- **Assessment of crop compatibility and potential impacts on agricultural yields:** Evaluate the compatibility of Agrivoltaics systems with the predominant crops grown in the target regions. Conduct detailed analyses to assess the potential impact on crop yields due to shading, microclimate changes, water availability, and other factors introduced by the solar panels. Additionally, provide suggestions on the variety of crops that could be grown under such conditions which would be compatible with Agrivoltaics.

- **Identification of suitable Agrivoltaics system configurations (fixed-tilt, tracking, bifacial, etc.):** Review and assess various Agrivoltaics system configurations, such as fixed-tilt, single-axis tracking, dual-axis tracking, and bifacial modules, to determine the most suitable options based on local conditions, crop requirements, and desired energy yield.
- **Analysis of integration requirements with existing agricultural practices and infrastructure:** Assess the compatibility of Agrivoltaics systems with existing agricultural practices, irrigation systems, machinery, and infrastructure. Identify any modifications or adaptations required to seamlessly integrate Agrivoltaics into the agricultural landscape.
- **Evaluation of irrigation requirements and compatibility:** Assess the existing irrigation systems and practices in the target regions. Analyze the compatibility of Agrivoltaics systems with different irrigation methods (e.g., drip irrigation, sprinkler systems) and identify potential modifications or adaptations required to ensure efficient water management and crop production.
- **Impact on water use and water footprint:** Investigate the potential impact of Agrivoltaics systems on water use and the overall water footprint of agricultural production. Evaluate the potential for water savings or increased water demand due to factors such as shading, microclimate changes, and altered evapotranspiration rates.

#### b. Economic Feasibility Assessment

- **Detailed cost analysis of Agrivoltaic systems (capital, installation, operations, and maintenance):** Conduct a comprehensive cost analysis, considering capital expenditures (CAPEX) for equipment (solar panels, mounting structures, inverters, etc.), installation costs, and operational expenditures (OPEX) for maintenance, labor, and other recurring costs over the project lifecycle.
- **Assessment of potential revenue streams (energy sales, crop yields, incentives, carbon credits):** Evaluate the potential revenue streams from Agrivoltaic projects, including energy sales (to utilities or under net metering schemes), crop yield revenues, potential incentives or subsidies for renewable energy or sustainable agriculture, and potential carbon credits or other environmental incentives.
- **Development of financial models to evaluate project viability metrics (NPV, IRR, payback period):** Develop detailed financial models to assess the economic viability of Agrivoltaic projects, including calculations of key financial metrics such as net present value (NPV), internal rate of return (IRR), and payback period. These models should consider all costs, revenues, financing options, and project timelines.
- **Sensitivity analysis to assess the impact of key variables on project economics:** Conduct sensitivity analyses to assess the impact of variations in key variables, such as capital costs, energy prices, crop yields, govt. / private incentives, and financing rates, on the overall project economics. This will help identify the critical factors affecting project viability.
- **Evaluation of financing options (private investment, public-private partnerships, loans, etc.):** Explore various financing options for Agrivoltaic projects, including private investment, public-private partnerships, concessional loans, DFIs and other financing mechanisms. Assess

their suitability, requirements, and potential impact on project economics. Provide overview on mechanisms for accessing such finance options.

- **Cost-benefit analysis and comparison with conventional solar PV and agricultural systems:** Perform a comprehensive cost-benefit analysis of Agrivoltaic systems, comparing them with conventional solar PV installations and traditional agricultural as well as solarized agricultural systems. This will help quantify the potential advantages and trade-offs of adopting Agrivoltaics.

#### c. **Enabling Environment Assessment**

- **Review of existing policies, regulations, and incentive schemes related to renewable energy and agriculture:** Conduct a thorough review of the existing policy and regulatory framework in the selected countries, including policies, regulations, and incentive schemes related to renewable energy, agriculture, land use, and environmental protection. Identify potential enablers or barriers for Agrivoltaics adoption. Provide recommendations on the possible adaptations in Policies / Regulations
- **Stakeholder mapping and analysis (government, utilities, farmers, research institutions, etc.):** Identify and map the key stakeholders involved in Agrivoltaic projects, including government agencies, utilities, research institutions, farmer associations, and local communities. Conduct a detailed stakeholder analysis to understand their roles, interests, and potential impacts on project implementation.
- **Assessment of stakeholder capacity, awareness, and readiness for Agrivoltaics adoption:** Evaluate the existing capacity, awareness, and readiness of stakeholders (government agencies, utilities, farmers, etc.) to plan, implement, and manage Agrivoltaics projects. Identify capacity gaps, training needs, and strategies to enhance stakeholder readiness.
- **Identification of potential barriers (technical, economic, regulatory, social, and environmental):** Based on the various assessments, identify potential barriers and challenges that may hinder the successful implementation of Agrivoltaic projects. These barriers could be technical, economic, regulatory, social, or environmental in nature.
- **Evaluation of social and community acceptance of Agrivoltaics:** Assess the level of social and community acceptance towards Agrivoltaics projects through consultations, surveys, and focus group discussions. Identify potential concerns, barriers, and strategies to enhance acceptance and support for Agrivoltaics initiatives.
