Section 5. Terms of Reference (TOR) for Strengthening Global Solar Supply Chains

Background

The International Solar Alliance (ISA), is an intergovernmental action-oriented, member-driven, collaborative platform for increased deployment of solar energy technologies as a means for bringing energy access, ensuring energy security, and driving energy transition in its 106 member countries.

The ISA is mandated to mobilize USD 1,000 billion dollars of investment for the deployment of solar energy technologies and expand solar markets by 2030. The ISA partners with multilateral development banks, development financial institutions, private and public sector organizations, civil society and other international institutions to deliver this change and impact.

Objective

The objective of this project is to produce an in-depth analysis of the global solar supply chain to gain a comprehensive understanding of international trends pertaining to end-to-end solar manufacturing. The objective is to gain greater knowledge and provide ISA member countries a holistic view of the supply chain, and ascertain the linkages within the multilateral approach.

The objective is to identify opportunities for supply chain improvements by catalyzing on scalability, avoiding bottlenecks and associated risks that could hamper the mobilizations of investment and adoption of solar in ISA member countries. The report will aim identify international policy points of concerns, and identify opportunities for leverage to support strong and resilient supply chains.

Note there has already been significant work done on solar manufacturing in the United States (eg. [NREL](#) and [DOE](#)), Europe (eg. [Fraunhofer](#) and [Solar Power Europe](#)), India (eg. [CEEW](#), [Assocham](#)) and elsewhere. This study is intended to build upon rather than duplicate these works and, in particular, provide a global perspective that would be applicable to the ISA membership more broadly.

Deliverables

To provide a presentation and comprehensive report that will equip ISA member countries and senior policy makers with a core understanding of a global perspective of the international solar manufacturing supply chain.

Phase one: Initial analysis and presentation pack

Phase one is to be completed in September, 2022 to align with the Clean Energy and Mission Innovation Ministerial in Pittsburgh, Pennsylvania. It is expected a senior member of the team will be available to present initial findings at this forum, along with the accompanying initial analysis and research as identified as below. Note- it is assumed that the partner organization will draw on existing data and analytics whether their own, or already publically available to complete phase one.

- 1) Analysis of the solar manufacturing supply chain including:
 - a. Raw materials
 - b. Ingot production
 - c. Wafer production
 - d. Cell manufacturing, including alternative and emerging cell technologies

- e. Module manufacturing
 - f. Ancillary components including but not limited to glass, frame, backsheet and silver paste
- 2) Calculation of total requirement of raw materials as well as manufacturing capacity at each stage in 2025, 2030 and 2035
 - 3) Evaluation of possible countries/regions for meeting the solar demand in 2030 and potential trajectory from 2023-2030
 - 4) Calculation of minimum regional demand for viability of local manufacturing at each stage (modules, cells, wafers, ingots) of the supply chain
 - 5) Evaluation of economic benefits to supply chain resiliency
 - 6) Three case studies of countries/regions that have successfully developed a manufacturing ecosystem using a supportive policy and regulatory framework. At least one should be from the renewable energy industry, but can also draw lessons from other capital-intensive manufacturing sectors
 - 7) Preliminary policy recommendations for countries/regions to support solar manufacturing
 - 8) Support for the ISA Secretariat in presenting the preliminary results and collecting stakeholder responses and feedback

Phase two: Research paper

Phase two is to be completed by February 2023. Proposed project schedule for the finalization of the report is requested, including preliminary findings and review process before submission of final draft.

- 1) Collation of stakeholder engagement and subsequent findings, including collaboration partners
- 2) Examination of cross-linkages among existing and emerging solar value chains
- 3) Identification of international trends
- 4) Identification of opportunities in solar supply chains including but not limited to scalability, bottlenecks, risks and subsequent risk mitigation
- 5) Specific policy recommendations for countries/regions to support solar manufacturing, including incentives, regulations, demand assurances, etc.
- 6) Roadmap and timeline for four regions to develop new or expand existing supply chain networks, including but not limited sourcing of raw material, manufacturing and assembly. Note- regions to be agreed prior to commencement of the research paper with ISA Secretariat.
- 7) Recommendations for potential specializations and focus of each country/region (eg. HJT vs. Topcon, organic/flexible cells, specific module types or form factors)

Key Competencies and Skill Sets for Team:

The core competencies of the project team include strength in analytical research, technical understanding of solar supply chains, and strong presentation and communication abilities. The project team should possess strong global networks, and where necessary seek to collaborate with partners in other regions. It is expected the project team will be able to draw on the expert advisors for input as required.

It would be valuable for the core project team to include:

- a) Team Lead
- b) Solar Technology Expert
- c) (Solar) Manufacturing Policy Expert

- d) Policy and regulatory expert
- e) Economic and financial expert and analysts

We recognize that each of the above domains may not correspond one to one to individuals assigned to the project, but each area of expertise should be covered by one or more team member or advisor.

Diversity and Inclusion

The ISA is striving to achieve gender parity in all its activities. In this regard, female-owned organizations and/or teams with significant gender diversity are strongly encouraged to submit a proposal.

The ISA recognizes the importance of valuing diversity and promoting inclusion in all our work programs and partnerships. The ISA strives to engage with organizations and/or teams that reflect its geographical representation and diversity.
